

PAUL CHRISTIAN YEE

Brampton, ON

☎ (647) 831-2978 ✉ yeepaulchristian@gmail.com [in linkedin.com/in/paul-christian-yee](https://www.linkedin.com/in/paul-christian-yee) github.com/grxvy-y

Education

George Brown College

Ontario College Diploma in Computer Programming

Toronto, ON

Expected Apr. 2026

Relevant Coursework

- Data Structures
- Algorithms Analysis
- Agile Development
- Systems Development
- Python Programming
- Cloud Architecture
- Database Integration
- User Interface Design

Technical Skills

Languages: JavaScript, TypeScript, Python, C#, PHP, HTML5, CSS3, SQL

Frameworks/Libraries: React.js, TSX, ASP.NET, Node.js, Vite, Tailwind CSS

Cloud/Databases: Microsoft Azure, AWS (EC2), Oracle, Supabase, PostgreSQL, Redis, Vercel

Tools/Concepts: Git/GitHub, Agile/Scrum, Data Structures, Load Testing, REST APIs

Technical Projects

Interactive Developer Portfolio | *React, TypeScript (TSX), Tailwind CSS, Vercel*

May 2026

- Engineered and deployed a responsive personal developer portfolio using React and TypeScript, leveraging Vercel for continuous integration and rapid edge deployment.
- Architected modular, reusable UI components styled with Tailwind CSS, ensuring strict accessibility standards and a seamless viewing experience across all device breakpoints.
- Optimized asset delivery and component rendering to showcase enterprise-grade technical projects and GitHub repositories with minimal load latency.

High-Traffic Inventory Microservice | *React, Node.js, AWS EC2, Oracle DB, Redis*

May 2026

- Architected a high-concurrency e-commerce microservice to simulate high-demand retail drops, engineered specifically to prevent race conditions and inventory overselling during massive traffic spikes.
- Implemented an in-memory gatekeeper using Redis to process initial frontend traffic, successfully protecting the core Oracle database from query overloading.
- Engineered strict database locking mechanisms ensuring ACID compliance, and managed temporary cart state using a 5-minute Time-To-Live (TTL) reservation token system.
- Executed rigorous load testing simulating 10,000 concurrent requests per minute to identify network bottlenecks and validate backend stability.

Cloud-Hosted Event Ticketing Platform | *ASP.NET, C#, Azure, CSHTML*

December 2025

- Engineered and deployed a fast-loading, cloud-hosted event ticketing system utilizing ASP.NET MVC architecture and Microsoft Azure infrastructure.
- Conducted rigorous performance and stress testing on back-end logic to handle 50+ simulated concurrent users attempting simultaneous ticket purchases with zero data loss.
- Designed a modern, highly responsive UX/UI to facilitate seamless ticket browsing and checkout flows, significantly reducing user friction.

Community Centre Event System | *React.js, Vite, Tailwind CSS, Supabase*

February 2026 – April 2026

- Initialized the architectural foundation using Vite and GitHub, specifically structuring the front-end environment to support future concurrent user sessions.
- Configured the integration framework for Supabase to manage complex relational user data, designing schemas optimized for future multi-user load testing.
- Designed UI/UX wireframes and planned a hard-coded transaction flow engineered to simulate and securely process simultaneous event bookings and registrations.

Dynamic Web Assessment Tool | *PHP, HTML5, CSS3*

December 2025

- Developed a dynamic, multi-topic web application from scratch using PHP, processing over 20+ conditional logic branches for real-time scoring metrics.
- Implemented robust state management to evaluate complex user inputs across multiple categories, dynamically rendering customized results pages with a 100% calculation accuracy rate.
